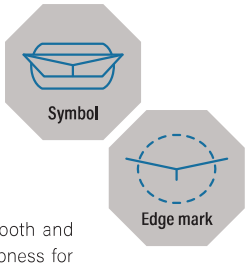
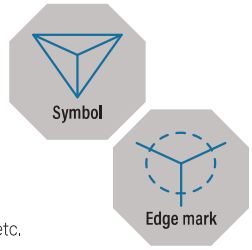
Z Trape spatula



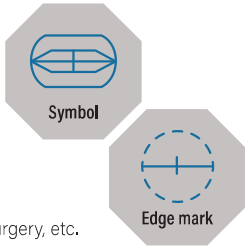
Specially designed spatula edge enabling smooth and stable penetration. Enough strenght and sharpness for sclera and muscles. Generally used for anterior segment surgeries. *Common in Ophthalmic Surgery.

R Reverse cut



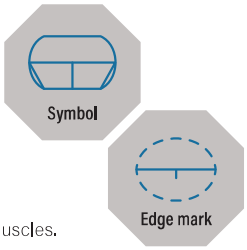
For the hard eye tissue such as Skin, Muscles, etc.

X Dia spatula



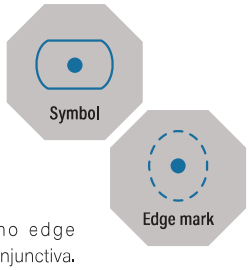
For Retinal detachment, Strabismus, Vitreous surgery, etc.

P Lancet



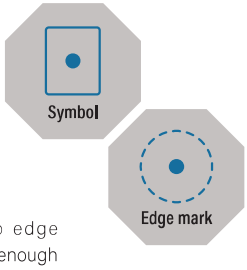
For Oculoplastic such as skin & skin oclar muscles. Smaller trauma than Reverse cutting.

T Taper point



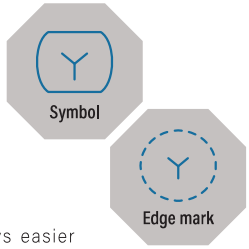
Needle edge is sharply pointed with no edge (Nontraumatic). Used for soft tissues such as conjunctiva.

0V Taper Point (Rectangular)



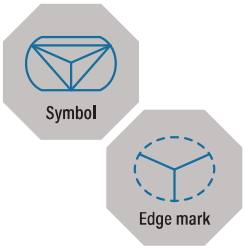
Needle edge is sharply pointed with no edge (Nontraumatic). Needle body is rectangular for enough strength to penetrate Sclera together with conjunctiva.

Y Cut taper



Taper point with side cutting edge allows easier penetration to tissues Used for repositioning of Palpebral furrow, Rectus traction, control suture and etc...

V Spatula side cut



For IOL fixation and Iris repair.

Needle curvature

e.g.

3/8 Circle

K 1/4 Circle 90 deg.

I 5/16 Circle 113 deg.

E 3/8 Circle 135 deg.

*Common in Ophthalmology

G 7/16 Circle 158 deg.

H 1/2 Circle 180 deg.

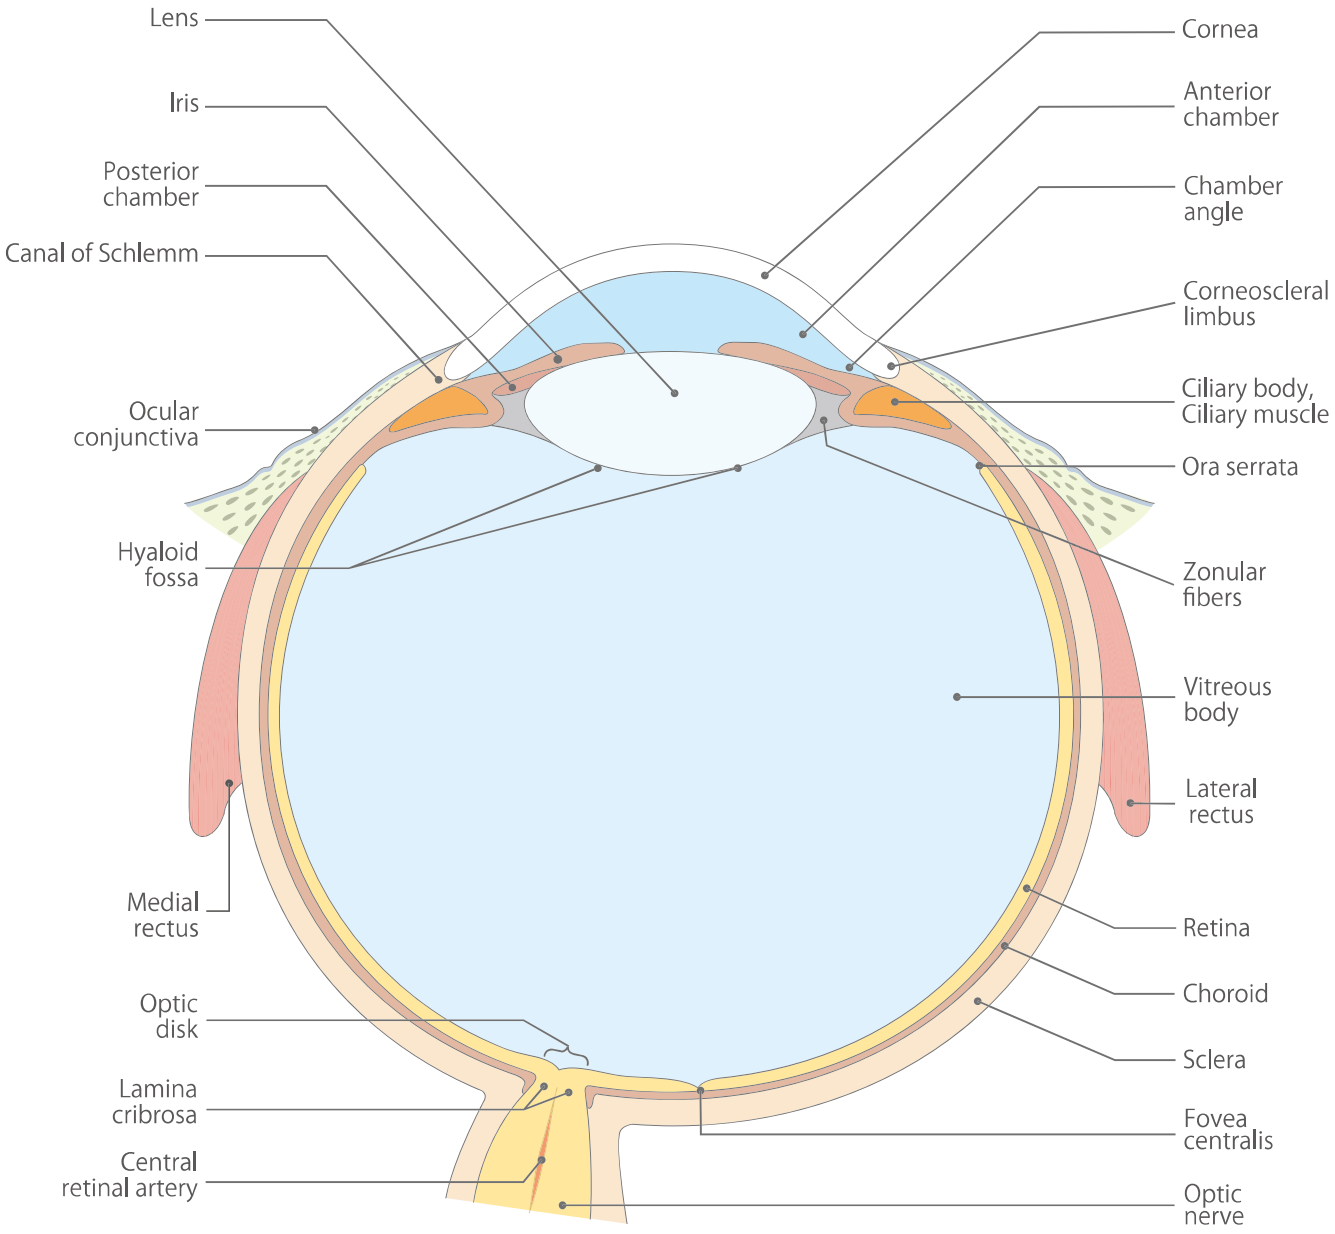
HUMAN EYE IN CROSS SECTION

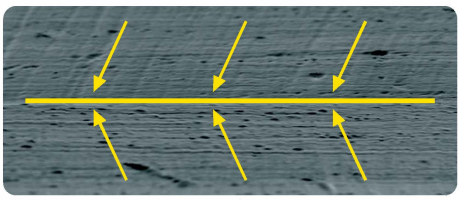


3 Outstanding Features of MANI® Ophthalmic Sutures

SHARPNESS

Crosslapped Edge

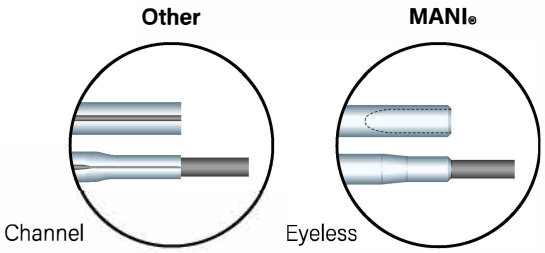
MANI®'s fine-processing technique has created the crosslapped edge which provides excellent sharpness and consistent quality. (Crosslapped edge: polishing direction is vertical to the edge)



LASER DRILLED END

Atraumatic Needle

All MANI eyeless needles for Ophthalmic Sutures have a laser drilled end which does not make unnecessary trauma at tissue penetration.



SUPERIOR IN SAFETY

"MANI®'s original hard fiber stainless steel"

MANI®'s original hard fiber stainless steel provides reliable strength on the tip to end. With this original material, MANI achieves a needle with high Ductility & high Bending Strength with corrosion resistance.
